Bad Website Project

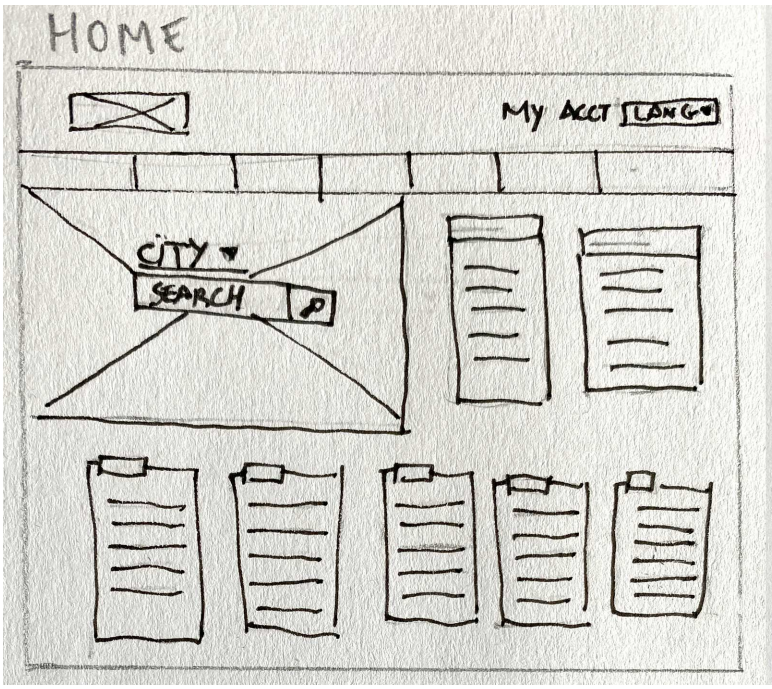
I choose for my “Really Bad Website” **Craigslist**, a very known “bad” website. The URL for the site is https://www.craigslist.org/.

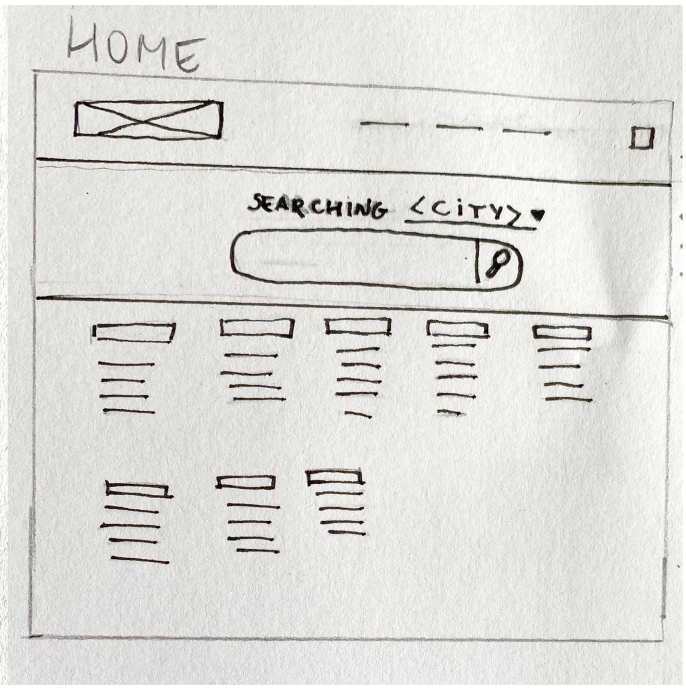
On the rapid prototype images, followed after, I added notes for the design selected and some feedback I received on the group activity.

For the low-fidelity prototype, I used **Adobe XD** with the **Quick Mockup** plugin, found at https://modular.adobe.com/quick-mockup. The desktop presentation can be found at https://xd.adobe.com/view/8712aac3-4dcb-4a7f-954d-867f5fe3cb5c-d241/?fullscreen and the mobile presentation at https://xd.adobe.com/view/290b93b4-601d-4a4a-b2c1-8751dd1bf43d-7c58/?fullscreen.

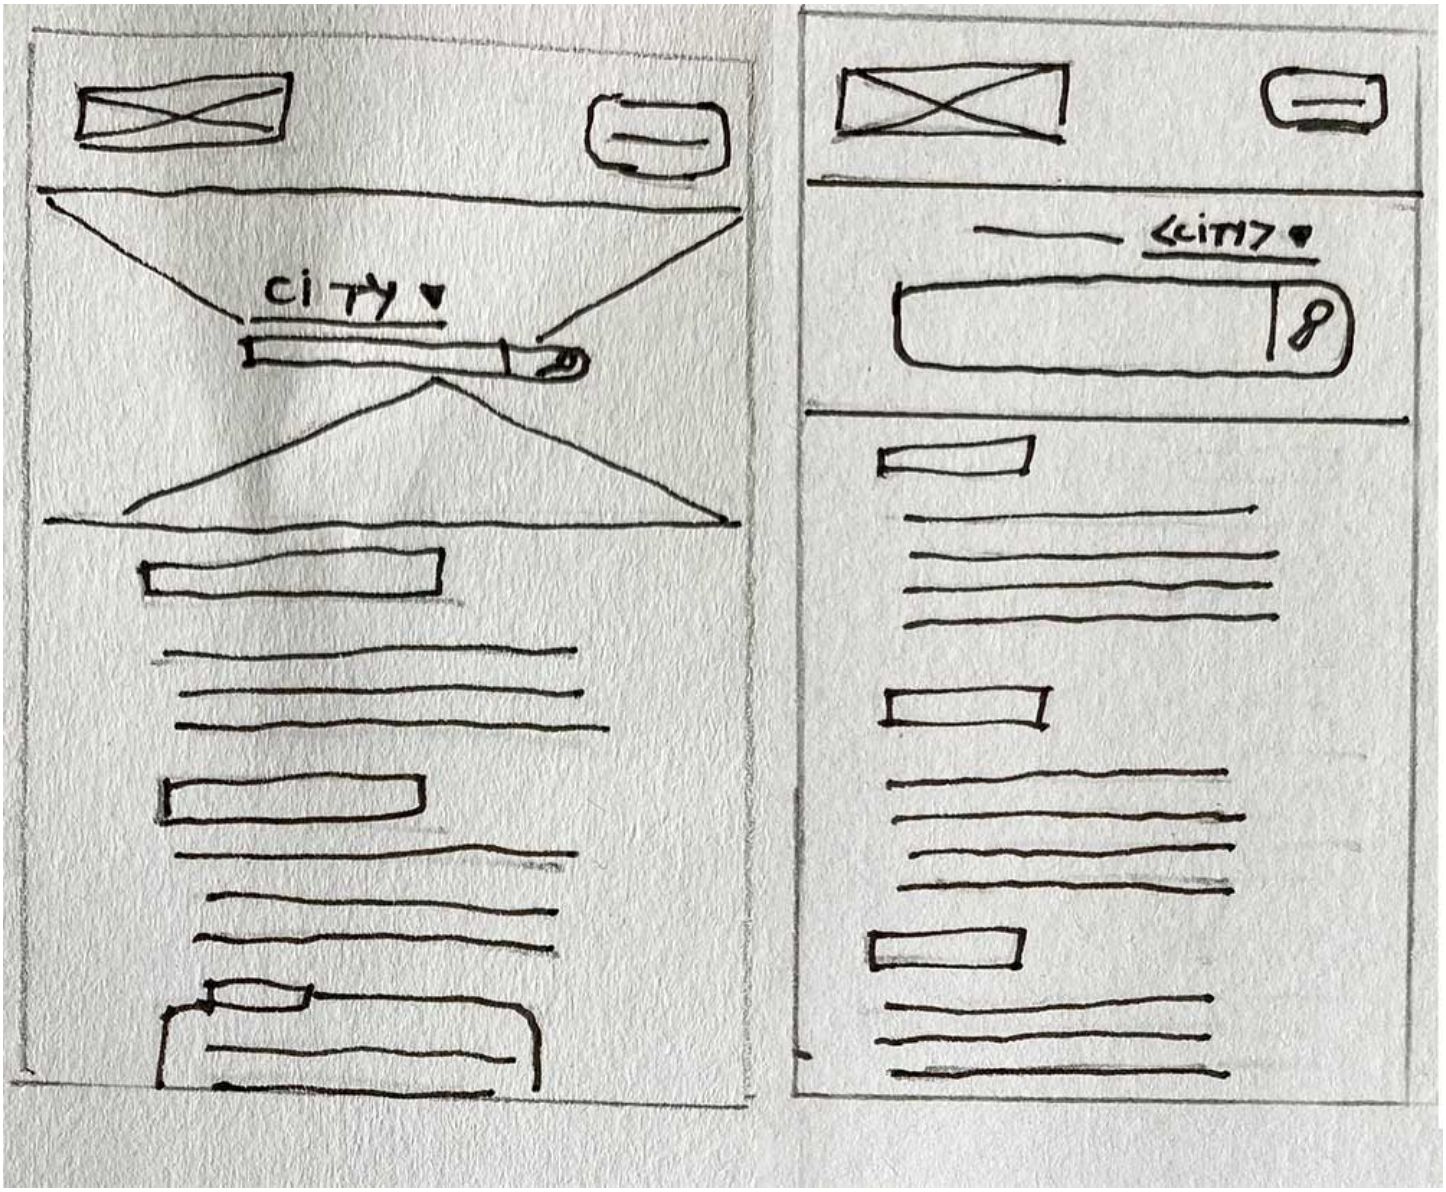
For the high-fidelity prototype, I improved my low-fidelity using copy from the chosen website and images from google. The desktop presentation is available at https://xd.adobe.com/view/f11d7183-df3d-4b0c-8d2e-ffec6af0c31a-a44e/?fullscreen and the mobile presentation at https://xd.adobe.com/view/bd5e0d21-6ccb-4846-80e8-2908b399675d-e80d/?fullscreen.

* Design selected
(feedback that it was cleaner)

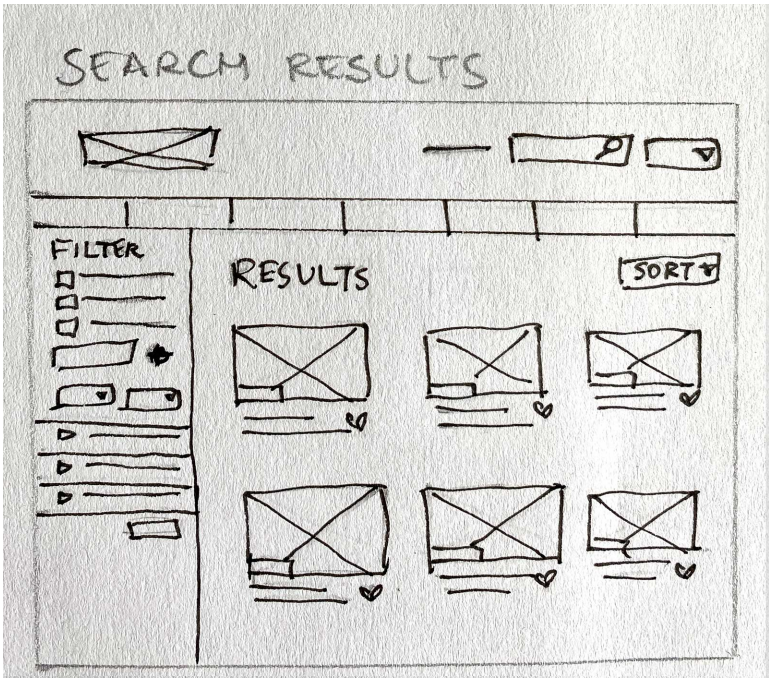


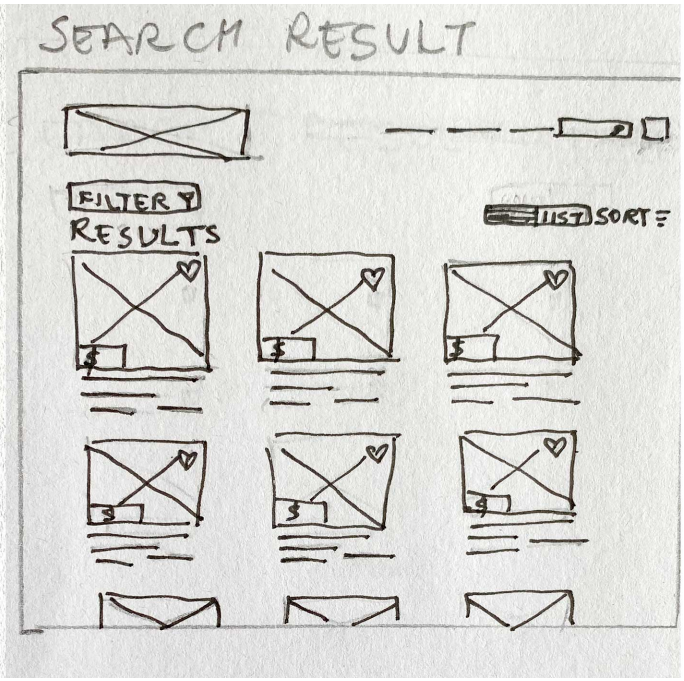


* Design selected
(same as previous page)

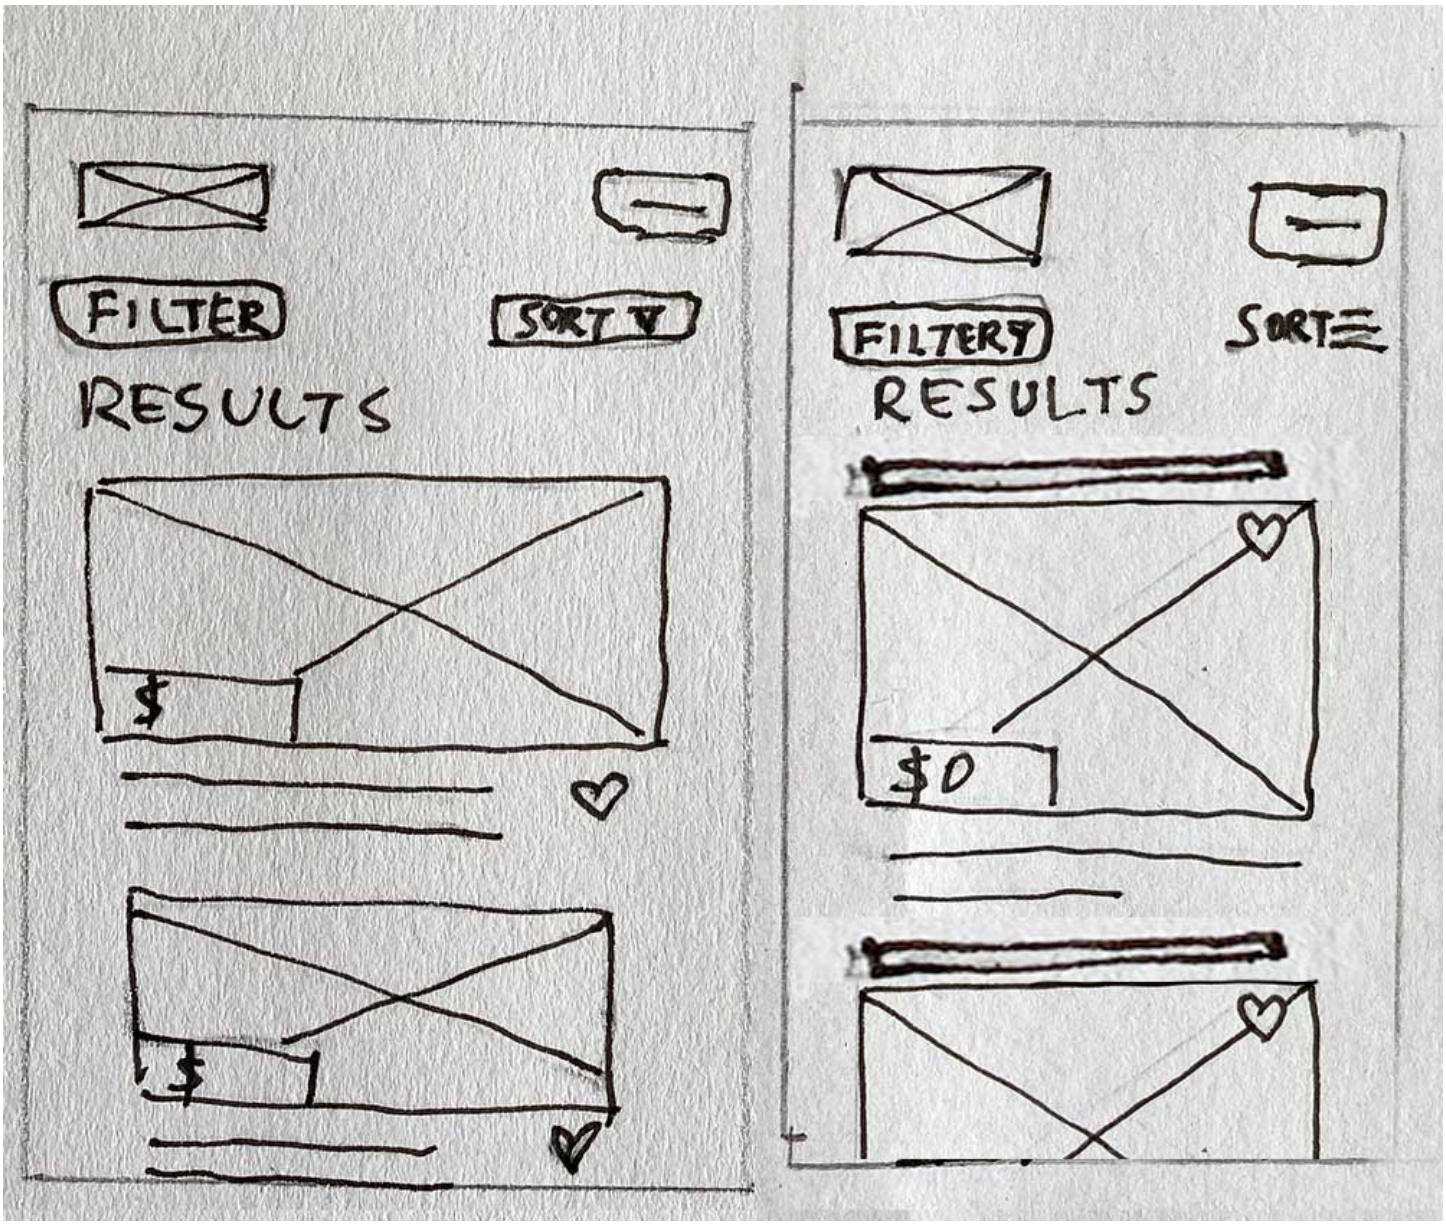


* Design selected
(but use the filter showing on the left
per-peer feedback also removed list view as
most people search for images)

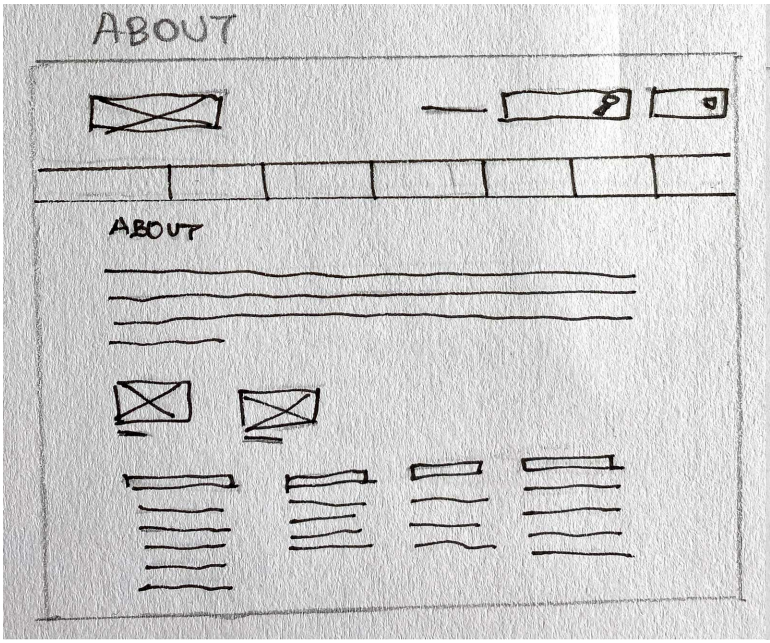


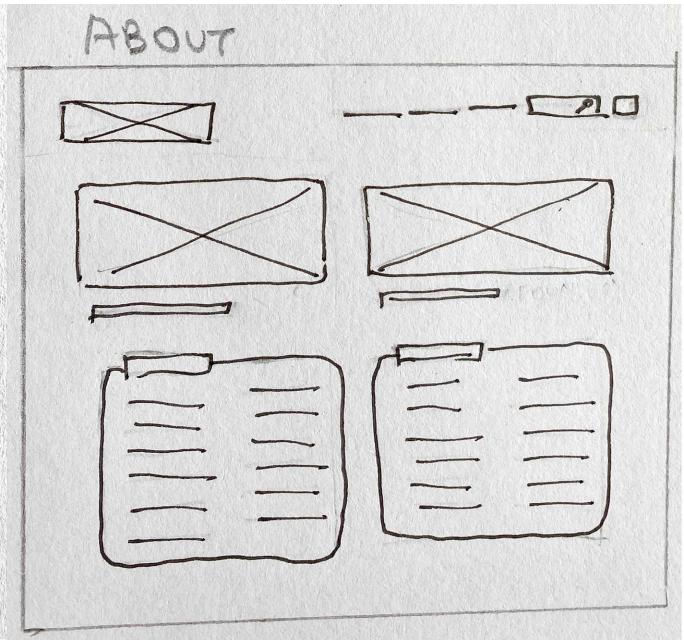


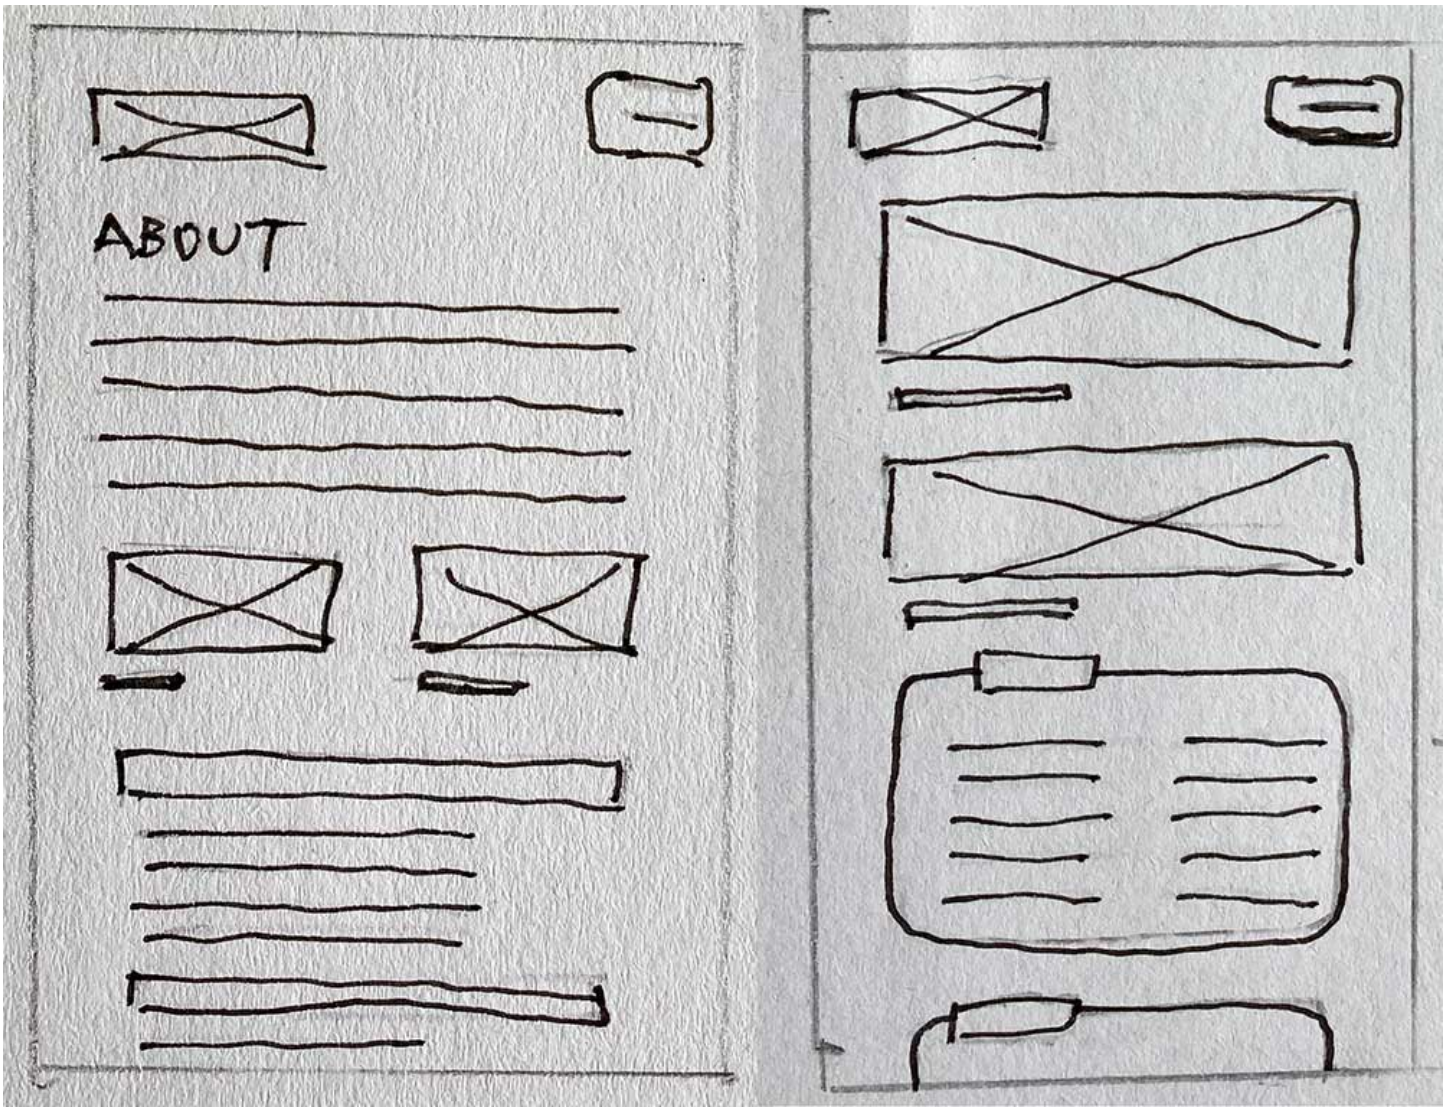
* Design selected
(filter will overlay like the hamburger menu)



* Design selected
(feedback that it was more straight forward)







* Design selected
(same as previous page)
